

CDC FOUNDATION

UNITE WITH US TO STOP ZIKA

The ongoing Zika outbreak is unprecedented.

The Centers for Disease Control and Prevention (CDC) is working diligently to protect America's health, safety and security from this alarming threat. Never before in history has the bite of an infected mosquito resulted in a devastating birth defect. The dangerous virus, which can also be transmitted through sexual transmission and blood transfusions, is spreading rapidly in many parts of the world. And local transmission is now occurring in the United States and its territories.

As part of its response, CDC's top priority is to protect pregnant women and to reduce the number of infants affected by microcephaly—a severe birth defect characterized by an abnormally small head and underdeveloped brain—and other serious developmental disabilities. A significant number of pregnant women in the United States and territories are infected with Zika, and that number will grow.

Nearly
60 COUNTRIES OR TERRITORIES
report Zika transmission

There are more than
3,100 TRAVEL-RELATED
cases of Zika infection in the continental United States

49 U.S. STATES
have reported Zika cases

In 2016, an estimated
25% OF PUERTO RICANS
may be infected by Zika

Zika has infected more than
730 PREGNANT WOMEN
in the continental U.S

More than
1,100 PREGNANT WOMEN
in U.S. territories

Partnership Solution

Until a vaccine is developed and proven safe, the CDC Foundation is helping to bridge critical gaps and expand CDC's domestic emergency response efforts to combat the Zika virus and protect those at greatest risk. As Zika evolves and spreads, **\$35 to \$50 million in flexible private-sector funding** is urgently needed to enable CDC to act swiftly. The CDC Foundation is working with CDC and partners to address a variety of critical needs.

CDC Funding Priorities

Provide access to free, effective contraception and counseling for women in Puerto Rico who choose to delay or avoid pregnancy during the Zika outbreak.

Deploy Zika education and awareness campaigns to help individuals and communities understand how to best protect pregnant women, both in Puerto Rico and the continental United States.

Improve clinical care for pregnant women infected with Zika, including increased ultrasound capacity and psychosocial support for families.

Mobilize community engagement through schools to involve students, parents and teachers to fight against Zika.

Boost effective vector control efforts in Puerto Rico to protect individuals and communities from mosquito bites.

Unite with the CDC Foundation to Stop Zika

Established by Congress more than two decades ago, the CDC Foundation advances the mission of the Centers for Disease Control and Prevention through philanthropy and public-private partnerships that protect the health, safety, and security of America and the world.

Please join the CDC Foundation to take these critical activities to scale. To discuss giving opportunities, contact Laura Angel:
